

Recap Digestive System

1. -----is outermost thing covering of intestine and is formed of Squamous epithelium and a small amount of connective tissue.
2. Muscularis externa is formed of outer -----muscles and inner -----muscles.
3. ----- is a thin sheet of muscles between submucosa and mucosa.
4. ----- -----is areolar connective tissue present in submucosa and mucosa.
5. ---- salivary glands lie below skin anterior to auricles and secrete saliva inside cheeks.
6. -----tonsils lie between palatoglossal and palatopharyngeal folds in mouth cavity.
7. Adult teeth include ----incisor/s, ----cuspid/s, -----premolar/s, and -----molars in each half of jaw.
8. Deciduous teeth teeth include ----incisor/s, ----cuspid/s, -----premolar/s, and -----molars in each half of jaw.
9. Arch shaped opening between mouth cavity and oropharynx is -----.
10. Parietal cells of Gastric glands secrete -----acid and chief cells secrete enzyme -----
11. Surface area in intestine is increased by -----, ----- and -----.
12. Bile is stored and concentrated in -----
13. Dome shaped part of stomach is ----- and esophagus opens into ----- of stomach.
14. ----duct and -----duct open into hepatopancreatic ampullae in duodenum.
15. Humans have # of -----deciduous = milk teeth and # of-----permanent teeth.
16. Pepsin is part of ----- juice and Trypsin is part of -----juice.
17. -----is unsegmented narrow tube attached to Cecum.
18. -----produces alkaline juice to neutralize acidity of food released from stomach and a complete spectrum of enzymes for digestion of all foods.
19. Colon absorbs vitamins -----, ----- and ----- produced by bacteria.
20. During swallowing of food ---- covers nasopharynx and ----- covers larynx.
21. ----- attaches stomach to liver; ----- omentum attaches stomach to colon.
22. In digestive system only esophagus is lined by a dry coarse connective tissue, ----- that fixes it to surrounding organs.
23. ----- ----- is a narrow band of smooth muscle fibers present in middle of colon and -----are small segments in colon.
24. During absorption of food glucose and amino acids directly pass into -----but fats pass into -----lymphatic vessels.
